Addendum Appendix D

West Kitsap

Maps of Recommended Management Options
This map was created from existing map sources, not from field surveys. While great care was taken in using the most current map sources available, no warranties of any sort, including accuracy, fitness, or merchantability accompany this product. *THIS MAP IS NOT A SUBSTITUTE FOR FIELD SURVEY* Determination of fitness for use lies with the user, as does the responsibility for understanding the accuracy and limitations of this map and data. There is no guarantee or warranty to its accuracy as to labeling, placement or location of any geographic features present on this map. These data are intended for informational purposes only, and should not be considered authoritative for engineering, navigational, surveying, and other site-specific uses. Kitsap County assumes no legal liability arising from the use of this map in a manner not consistent with the original intent. In no event shall Kitsap County be liable for damages of any kind, including loss of anticipated benefits arising from the use of this map and data.

Figure D1. Overview map of recommended management options for the Nearshore Units

Management Options
Conserve & Restore
Protect & Conserve & Restore
Restore
Enhance
Enhance & Create

Each colored area represents an Assessment Unit, and is color-coded for the Recommended Management Action for that specific Unit.
WEST KITSAP NEARSHORE ASSESSMENT - RECOMMENDED OPTIONS

Management Options

- Protect, Conserve, Restore
- Conserve, Restore
- Restore
- Enhance
- Enhance, Create
- Shoreline
- Incorporated City
- Military
- Tribal Lands
- DriftCell

Each colored area represents a Nearshore Assessment Unit (NAU), and is labeled with the Id and colored by the Recommended Management Option for that Unit. Mapped categories represent top viable restoration strategies, other strategies including Enhancement may be successful in High Disturbance sites. Drift Cells are labeled and outlined in Red, and are also color-coded for disturbance. Green for Low Disturbance Areas, Yellow for Medium, and Red for High Disturbance Areas.

*The hatching represents areas where the dominant process site score was high, indicating high disturbance to the site scale dominant processes (i.e., fluvial deposition, sediment transport, wave erosion, etc.). Restoration focused on alleviating the disturbances to these processes could improve conditions at the site and landscape scale.

- This map was created from existing map sources, not from field surveys.
- While great care was taken in using the most current map sources available, no warranties of any sort, including accuracy, fitness, or merchantability accompany this product. Determination of fitness for use lies with the user, as does the responsibility for understanding the accuracy and limitations of this map and data. Kitsap County assumes no legal liability arising from the use of this map in a manner not consistent with the original intent. In no event shall Kitsap County be liable for damages of any kind, including loss of anticipated benefits arising from the use of this map and data.

- Tribal Lands

DriftCell

Each colored area represents a Nearshore Assessment Unit (NAU), and is labeled with the ID and colored by the Recommended Management Option for that Unit. Mapped categories represent top viable restoration strategies, other strategies including Enhancement may be successful in High Disturbance sites. Drift Cells are labeled and outlined in Red, and are also color-coded for disturbance. Green for Low Disturbance Areas, Yellow for Medium, and Red for High Disturbance Areas.

*The hatching represents areas where the dominant process site score was high, indicating high disturbance to the site scale dominant processes (i.e., fluvial deposition, sediment transport, wave erosion, etc.). Restoration focused on alleviating the disturbances to these processes could improve conditions at the site and landscape scale.

Map Date: October 5, 2010
WEST KITSAP NEARSHORE ASSESSMENT - RECOMMENDED OPTIONS

Management Options
- Protect, Conserve, Restore
- Conserve, Restore
- Restore
- Enhance
- Enhance, Create
- Shoreline
- Incorporated City
- Military
- Tribal Lands
- Drift Cell

Each colored area represents a Nearshore Assessment Unit (NAU), and is labeled with the Id and colored by the Recommended Management Option for that Unit. Mapped categories represent top viable restoration strategies, other strategies including Enhancement may be successful in High Disturbance sites. Drift Cells are labeled and outlined in Red, and are also color-coded for disturbance. Green for Low Disturbance Areas, Yellow for Medium, and Red for High Disturbance Areas.

*The hatching represents areas where the dominant process site score was high, indicating high disturbance to the site scale dominant processes (i.e., fluvial deposition, sediment transport, wave erosion, etc.). Restoration focused on alleviating the disturbances to these processes could improve conditions at the site and landscape scale.
